

## International Tax Issues Mentimeter for SDG Case

### Note to Instructors –

[Mentimeter](#) is an interactive presentation tool that engages students and allows real-time interaction in teaching sessions. Students can pose questions, respond to quizzes, vote in polls and create word clouds via their phones or other devices. It can be used as an icebreaker, checking knowledge, gauging opinion and prompting debate.

Mentimeter is completely anonymous and therefore not designed for assessing the knowledge and engagement of individual students. It is however very helpful to get an overview of where a group of students might be struggling and uncovering common misconceptions. The anonymity can sometimes encourage quieter students to engage and ask questions.

This is an example of a mentimeter presentation that may supplement early readings or tutorials in international taxation (it is currently set at audience and not presenter pace):
